DIRECT DRIVE

NO BELT OR PULLEY

LG's Quiet Direct Drive motor reduces the causes of defects and increases durability.

GUARANTEE

10 YEAR WARRANTY

For your peace of mind, all LG Direct Drive motors carry a 10-year warranty. LG's inverter Direct Drive technology has recently been developed for use in the dishwasher range.

TRUESTEAM™

PERFORMANCE

TrueSteam™ uses steam power to give you superior cleaning. Clothes can be refreshed in just 20 minutes and creases disappear without ironing - all without adding to your carbon footprint. So you get to spend less time doing the laundry and more time having fun.

REMOVES ALLERGENS

Steam particles are smaller than water droplets and can penetrate fabrics better, this improves washing performance and water consumption. LG's unique TRUESTEAM™ jets through fabrics dislodging allergens more effectively.

LG DIRECT DRIVE WASHING MACHINES

9KG, 6 MOTION DIRECT DRIVE

TRUESTEAM™ BETTER FOR THE ENVIRONMENT

Less energy is used with steam as less water is needed. Over the course of one year's laundry you could make a saving of one month's water and energy bills. That's good for your pocket as well as the environment.

LG TUMBLE DRYERS

8KG TUMBLE DRYER

- A++ Energy Rating

LG TRUESTEAM™ DISHWASHERS

NO PREWASHING

There's nothing new about steam power but the idea of using the power of steam cleaning to keep your dishes gleaming is unique to LG dishwashers. Our steam generator offers you the option to use high temperature steam (95°C) to remove stubborn dried-on food and difficult-to-remove stains such as lipstick and gravy.

FRIDGE FREEZER FEATURE HIGHLIGHTS

LINEAR COMPRESSOR

LG's Linear Compressor Technology is quiet and efficient. Its unique direct transmission mechanism minimises mechanical loss, thus saving energy, increasing durability and reducing noise. Conventional compressors have four friction points that cause energy loss. The LG Linear Compressor has only one friction point, which enables energy savings of up to 45% more than other A rated appliances. LG is so confident in the durability and reliability of this technology that it includes a free 10-year warranty on the Linear Compressor.

10 YEAR WARRANTY

LG is so confident in the durability and reliability of its technology that it includes a free 10-year warranty on the Linear Compressor.

FRESHNESS

The Linear Compressor promotes freshness by maintaining an optimised temperature throughout your fridge. This is achieved by the compressor functioning only when required, ensuring no hotspots within the appliance.

ENERGY SAVING

Conventional compressors have four friction points that cause energy loss. The LG Linear Compressor has only one friction point ensuring ultimate efficiency. LG's A++ refrigeration range reduces energy costs up to 25% when compared to an A+ rated model, so you can support the environment and save on energy bills too.

TOTAL NO FROST

LG's Total No Frost interior keeps your fridge hygienic and odour free and means no more defrosting. The Multi Air Flow system evenly spreads cool air into the fridge, maintaining an even temperature throughout. Faster cooling means that air in the interior of the fridge is cooled quickly.

MOIST BALANCE CRISPER

Specially designed lattice-type box cover which maintains moisture at an optimum level. Moisture from stored food is evaporated and condensed onto the lattice, maintaining the correct balance of moisture in the box, keeping your fresh fruit and vegetables crisper for longer.

BIOSHIELD

Mould thrives in a damp environment, making a refrigerator the perfect home for it to flourish, especially over the course of five, ten or even fifteen years. This is why all LG refrigerator gaskets are treated with BioShield, a proprietary anti-microbial agent that prevents mould growth from causing gasket and seal distortion, thereby prolonging the fridge.

SMART, STRONG & ENERGY EFFICIENT

Having the LinearCompressor in your refrigerator means you use less energy and save on expensive bills. It makes less noise, keeps food fresher and comes with a 10 year guarantee.
